RENEWABLES

## Public Information Days for East Anglia THREE Offshore Windfarm

**ScottishPower  
Renewables will  
hold a series of  
Public Information  
Days ahead of  
construction starting  
on East Anglia THREE  
Offshore Windfarm  
in July 2022.**

**The East Anglia THREE offshore windfarm was consented in 2017 and will be built 69km off the coast of Lowestoft.**

Power from the windfarm will connect onshore at Bawdsey where the onshore cables will run via pre-installed ducts to a new purpose built converter station near Bramford and connect into the existing National Grid substation. To minimise disruption to local communities, the ducts for East Anglia THREE's high voltage cables were laid during the construction of East Anglia ONE Offshore Windfarm.

These drop-in events will provide an opportunity to meet the project management and construction teams and ask questions about the Windfarm.

**Playford Village Hall,  
Tuesday 28 June 11:00-17:00**

---

**Waldringfield Village Hall,  
Wednesday 29 June 13:00-19:30**

ScottishPower Renewables will continue to engage with communities along the onshore cable corridor, before installation of HV cables begins in 2024.
